GEV fail-soft gate w

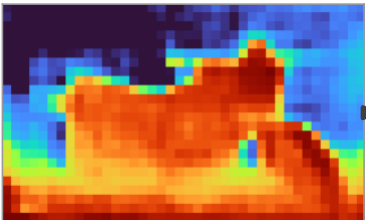

The pipeline starts from a coarse guess and sharpens it scale by scale.

At 1/4 resolution a second, independent estimate (the GEV proposal) is blended in only where the gate w opens:

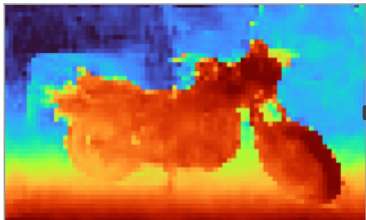

$w \rightarrow 1$ trust the GEV proposal (bright)

$w \rightarrow 0$ keep the recurrent estimate (dark)

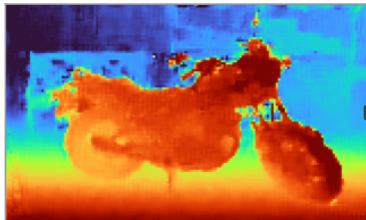

Init @ 1/16

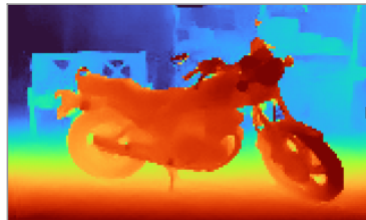

Refined @ 1/8

GEV proposal @ 1/4

Fused + refined @ 1/4
